OBJECTIVE

A highly motivated and results-oriented professional with a strong foundation in software development and a passion for leveraging data-driven insights. My machine learning expertise spans a wide range of techniques and algorithms. Possessing proven expertise in Java, GoLang and Python, I excel at building robust and scalable applications.

EDUCATION

- **Bachelor of Technology in Sir C R Reddy College of Engineering** Nov 2021 - May 2025
Artificial Intelligence and Data Science
 - GPA: 8.2/10

PROJECTS

- **AI-Powered Legal and Financial Document Search Assistant** Major Project April 2025
Tools -> Semantic Search, BERT Model, FAISS library, NLP, Gradio UI 
 - The exponential growth of legal and financial documentation has created a pressing need for intelligent information retrieval systems that go beyond traditional keyword search.
 - The Assistant demonstrates a Robust, Scalable and Intelligent framework for transforming the way legal and financial professionals interact with complex text corpora.
- **Building Convolutional Neural Networks for Simple Images Classification** Minor Project May 2024
Tools -> TensorFlow, Numpy, Matplotlib, Keras 
 - The objective of classifying cats vs. dogs is well-defined and easily understood. CNNs are a suitable choice for image classification, and the project leverages relevant deep learning frameworks.
- **Student DataBase Management Using JAVA and RestfulAPI** Jan 2025
Tools: Spring Boot RestAPI CRUD Operations using Spring boot JPA and PostMan 
 - The Student Repository uses Spring Data JPA to perform the requested operation on the MySQL database. returned result is passed back through the layers (repository -> service -> controller) to the controller.
- **Optimizing Urban Traffic Flow using AI-based Predictive Models** Dec 2024
Tools: Python, Sci-kit, Numpy, Pandas 
 - To use Ensembling machine learning Techniques to predict traffic flow in urban areas and optimize it. Historical traffic data is gathered to train a model that can predict traffic congestion and suggest ways to improve traffic flow.
 - Exploratory Data Analysis (EDA) helped to understand the dataset and find patterns.

SKILLS

- Leadership Organisation, Problem Solving, Adaptability, Communication skills
- Java, Python, GoLang, C Language, SQL, Data Structures Algorithms, OOPS
- Machine Learning and Data Science : Scikit, Keras, Pytorch, TensorFlow, Pandas, Numpy, Matplotlib
- Applied Knowledge on Data Analytics and Data visualization

INTERNSHIPS

- **Cloud Computing Intern** June 2024 - July 2024
IBM Edunet Foundation (virtual)
 - Developed sentiment analysis model using Ensemble Machine Learning techniques for IMDB movie reviews.
- **Operations and Project Management Intern** Feb 2025 - Apr 2025
Inspacco company (virtual) stipend based, pune, Maharashtra
 - Developed and implemented Email Spam Filtering models using machine learning techniques. Naive Bayes calculates the probability of an email being spam based on the presence of certain words or features.
- **Machine learning Intern** sept 2023 - Nov 2023
YBI Foundation
 - Developed and implemented Email Spam Filtering models using machine learning techniques. Naive Bayes calculates the probability of an email being spam based on the presence of certain words or features.
